

# Smart Command 'Tevolve'

Internet communication hub

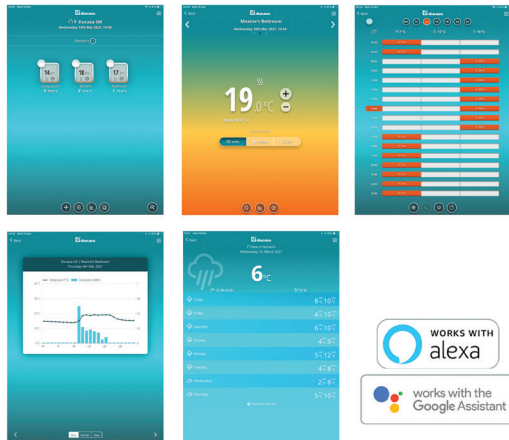

The Ducasa Gateway plugs into your internet router and connects up to 30 radiators or towel rails to our intuitive Smart-Command 'Tevolve' app, which is free to download and use. The app allows you to programme your heating systems, over-ride the settings and review energy consumption either at home or when away. For extended range and greater stability the Gateway uses 868MHz radio frequency to communicate to the radiators, each of which incorporates a signal booster to create a robust mesh system avoiding annoying 'drop outs'

associated with lesser Wi-Fi only systems. In addition to the simple and intuitive onscreen app, Smart-Command 'Tevolve' also works in conjunction with Alexa and Google Assist providing voice control for your Avant DGi+, Colorado DGi+ and Vitro-i+ heaters. Geofencing is also included as standard so your radiators can automatically move into an economy mode when you leave your home and resume the pre-set programme on your return. These great energy saving features help to reduce running costs and maintain the comfort of your home or office.
