

The AVANT DGP

Fully programmable electric radiator

The Avant DGP is a fluid-filled, aluminium radiator providing fast heat up times together with advanced digital control, perfect for creating a comfortable environment in any room in your home or at work and helping to reduce running costs.

Comfort, Economy and Frost protection modes can be programmed 24/7 so you experience the exact temperature required, whether you are heating a bedroom, kitchen or office. Simple manual temperature override is achieved at the press of a button and will automatically return to your bespoke schedule at the next programme change.

As you would expect from Ducasa, the radiator is LOT20

compliant and incorporates energy saving features such as Eco-Start adaptive learning and Open Window Detection as standard.

High grade aluminium with a beautiful polyester powder-coat finish means the Avant DGP will continue to look good and perform for many years to come, while the clear backlit LCD display makes programming and setting your required temperature simple.

Ducasa's clever design, quality components and precise manufacturing ensures comfort that is simply head and shoulders above our competitors.

Features

- Low consumption energy efficient radiator
- Durable high grade cast aluminium construction
- Concealed heating fins to maximise heat output
- Feels like traditional 'wet system' heating
- Full 24/7 integral programming
- User set temperatures for Comfort, Economy and Frost protection modes
- Manual temperature override with auto reset
- LCD backlit screen
- Energy saving digital thermostat
- Eco-Start adaptive learning feature
- Open window detection with auto standby
- DIY install with 'quick fit' wall fixing system
- LOT 20 Eco-Design and CE approved
- Discreet master power switch
- Class 1 insulation
- Safety cut-out device
- Tamperproof keypad lock

Code	Wattage	Size in mm W x H x D	Colour	IP Rating	Voltage	Insulation	Weight kg
